Lampung, Indonesia

Summary

Computer Science graduate from Universitas Lampung (GPA 3.47/4.00) with hands-on experience in web development, UI/UX design, system analysis, and IT project coordination. Proficient in Next.js, React.js, Node.js, Laravel, PHP, PostgreSQL, Prisma ORM, and Git. Experienced in developing a web-based Decision Support System using AHP, TOPSIS, and SAW, as well as contributing to the development of an e-Form system at Bank Lampung. Demonstrated leadership through teaching assistant roles and coordination of multiple organizational projects, with strong problem-solving, communication, and team collaboration skills.

Education

Lampung University

Bandar Lampung, Lampung

Bachelor of Computer Science

2022 - 2026

- GPA: 3.47/4.00
- Relevant Coursework: Advanced Web Programming, Data Warehouse & Big Data, Systems Analysis & Design
- Thesis: Decision Support System for Teaching Assistant Selection in the Special Division of the Computer Science Student Association Using HATS (Hybrid AHP-TOPSIS-SAW)

Experience

Bank Lampung

IT Staff

December 2024 – February 2025

- Led a 4-member project team by coordinating task distribution and development activities for a web-based e-Form system.
- Analyzed user requirements and designed the system's UI/UX in Figma, ensuring the interface and features aligned with identified business requirements.
- Supported system completion through testing, documentation, and project coordination, delivering a web-based e-Form system with 6 core features ready for operational use.

Lampung University

Teaching Assistant in Systems Analysis and Design

February – July 2025

- Assisted 30-35 students in understanding systems analysis and design concepts through lectures, practical sessions, and technical guidance.
- Prepared 8 practical modules along learning materials, modules, assignments, and assessments aligned with course topics and learning objectives.
- Supported lecturers and students throughout practical sessions by reviewing assignments, assisting student projects, and providing feedback on system analysis and design work.

Lampung University

Teaching Assistant in Structured Programming

February 2024 – July 2024

- Guided 30–35 students in learning and applying advanced C++ programming concepts, building upon foundational structured programming principles.
- Prepared and delivered 8 practical learning modules, along with learning materials and exercises to support hands-on programming activities.
- Assisted students during practical sessions by providing technical guidance, reviewing assignments, and supporting their understanding of advanced C++ programming concepts.

- Guided 30–35 students in learning and implementing Object-Oriented Programming concepts using Java across 16 practical sessions.
- Prepared 8 practical modules along with learning materials, assignments, and assessments to support hands-on programming activities.
- Assisted students with programming projects and practical exercises while supporting lecturers in assignment review and evaluation.

Organizations

Computer Science Student Association (HIMAKOM)

Event Division Coordinator (Various Programs)

February 2023 – December 2024

- Coordinated event divisions across 10+ HIMAKOM programs and activities, including PRINTER, Computer Science Showdown, Fosi Asdos, Pelantikan, Upgrading, and Pelatihan Asdos.
- Managed task distribution, coordination, and execution within assigned divisions to ensure event activities and operational responsibilities were completed according to plan.
- Collaborated with committee members and cross-divisional teams to support event logistics, security, publication, and disciplinary operations.

Projects

Web-Based Decision Support System for Teaching Assistant Selection

- Developed a web-based Decision Support System for teaching assistant selection using the HATS (Hybrid AHP-TOPSIS-SAW) method.
- Implemented CRUD operations, AHP criteria weighting, TOPSIS and SAW calculations, and system functionality using Next.js, React.js, PostgreSQL, and Prisma ORM.
- Conducted system testing using 4 candidate records and validated the system's calculation and ranking results.

Web-Based e-Form System – Bank Lampung

- Designed the admin-facing UI/UX and interactive prototype in Figma for a web-based e-Form system supporting customer transaction and service processes.
- Analyzed system requirements and user flows across six core functions, including credit applications, online complaints, cash deposits, cash withdrawals, data history, and account management.
- Conducted usability testing, documented findings, to refine the interface and support system implementation.

Outpatient Healthcare Information System

- Developed the frontend of a web-based outpatient healthcare information system using HTML and CSS to support digitalized healthcare service processes.
- Translated system analysis and design requirements into user-facing interfaces for healthcare service workflows.
- Delivered a functional application simulation representing common digital healthcare service processes.

stuRENT – Student Laptop Rental Platform

- Designed the UI/UX and interactive prototype in Figma for a web-based laptop rental platform aimed at Universitas Lampung students.
- Designed user flows and interfaces for the student rental process based on the identified system requirements.
- Delivered a complete Figma prototype simulating a student-oriented laptop rental service.

Skills

Programming Languages: JavaScript, TypeScript, PHP, Python

Frameworks & Libraries: Next.js, React.js, Node.js, Laravel

Databases & ORM: PostgreSQL, MySQL, MongoDB, Prisma ORM

Tools: Git, GitHub, GitLab, Figma

Technical Skills: Software Engineering, System Analysis, UI/UX Design, Requirements Analysis

Soft Skills: Leadership, Problem Solving, Project Management, Team Collaboration
